

Evision™

Enterprise Asset Management

Evision™ is an inclusive technology management system designed for enterprise customers needing better tracking and management for their assets. Evision™ is designed to provide the enterprise manager with tools for tracking the many aspects of an enterprise network in their entire site inventory including vehicles, tables, books or anything else they might need to keep track of. Evision's™ design allows for the inventory control feature to be directly linked to a unique "help-desk" system which allows for a user to input daily service problems, connect the problems to specific assets and direct the problem to the appropriate service personnel. The system supports printing inventory tags in compliance with federal purchasing and disposal regulations. Evision™ is an internet based ASP (Application Service Provider) which minimizes technical challenges associated with software installations eliminating worry about installing upgrades, data integrity or backups of your information.

Features:

- **Inventory**– Equipment life-cycle management, RMA tracking, software license tracking, item location management, service history, equipment assignment, inventory reports and advanced search capabilities.
- **Warranty**– Find hidden dollars in unused equipment warranties. You will never have to search for the in voice to see if an item is still under warranty and who is liable for the warranty.
- **Help Desk**– Problem tracking, service provider collaboration, service history, trouble ticket prioritization, service contract tracking, technician assignment and email notification.
- **Application Service Provider Model** – Web interface, accessible anywhere and anytime, no client installation, lower total cost of ownership, no backups, data export services and more!!
- **Tech Support for End Users** - All end users can call for support on using Evision™.
